SAVE THE MILK CANS

Uncle Sam Needs Tin

Farmers Can Help

Cream and Milk Buyers Can Help

Transportation Agents Can Help

We Can All Help

So much tin is required for war material that our Government has restricted the use of tin to the most necessary industries. No more tin can be used for containers where some other material will serve. The supply for any purpose is very limited. It may soon be impossible to secure more milk or cream cans till the end of the war.

It is our patriotic duty to help Uncle Sam and to help ourselves by conserving the tin supply in every possible way.

Dairy Farmers, Cream and Milk Buyers and Transportation Agents can help by the proper care of cans. Don't let the cans we have go to rack and ruin.

Don't use milk cans for anything but milk or cream. If you are using them for any other purpose discontinue such practice, and use some other kind of vessel.

If you are using milk cans that belong to some one else return them to their rightful owner. He needs them.
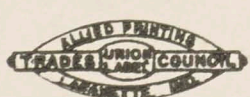

Have all cans hauled promptly from the depot and properly protected from the weather.

When leaky or damaged cans are discovered, ship them by freight (collect) at once to your Company's home plant for repair.
If you have cans loaned out, call them in and put them into shipping service.

Give cans all possible protection from weather till called for.
If cans have been put off at your station through error, see that they are promptly forwarded.
If you have on hand, cans of some Creamery who has no representative in your town, notify that Creamery, so the cans can be transferred to some point where needed.

By being more careful, by taking a little more trouble to save and preserve, and by constantly remembering "UNCLE SAM NEEDS MORE TIN."
